THIN FILM CAPACITIVE ELEMENT, METHOD FOR PRODUCING SAME AND ELECTRONIC DEVICE

5

ABSTRACT OF THE DISCLOSURE

An integrated thin film capacitive element comprising a dielectric material of the specified 10 composition that exhibits increased voltage tunability of capacitance and capacitance density and a production process thereof are disclosed. The integrated thin film capacitive element comprises a capacitor structure 15 constituted from a lower electrode, a dielectric layer comprised of the high dielectric constant material represented by the formula: $(Ba_{(1-v),(1-x)}Sr_{(1-v)x}Y_v)Ti_{1+z}O_{3+\delta}$ with the range 0 < x < 1, 0.007 < y < 0.02, $-1 < \delta < 0.5$, and $(Ba_{(1-y)}(1-x)+Sr_{(1-y)x})/Ti_{1+z} < 1$, and an upper electrode. An 20 electronic device comprising the capacitive element of the present invention is also disclosed.
